**INSTRUCTIONS
FOR HIT-24
STRIKE LOCATOR
FOR
STEEL DOORS & JAMBS**

**WHEN USING POWER TOOLS
ALWAYS WEAR
EYE AND EAR PROTECTION!!**

Lock prep with faceplate indentation made by our Pit Bull tool. The HIT-24 will also work if you use a cut out and mounting brackets.

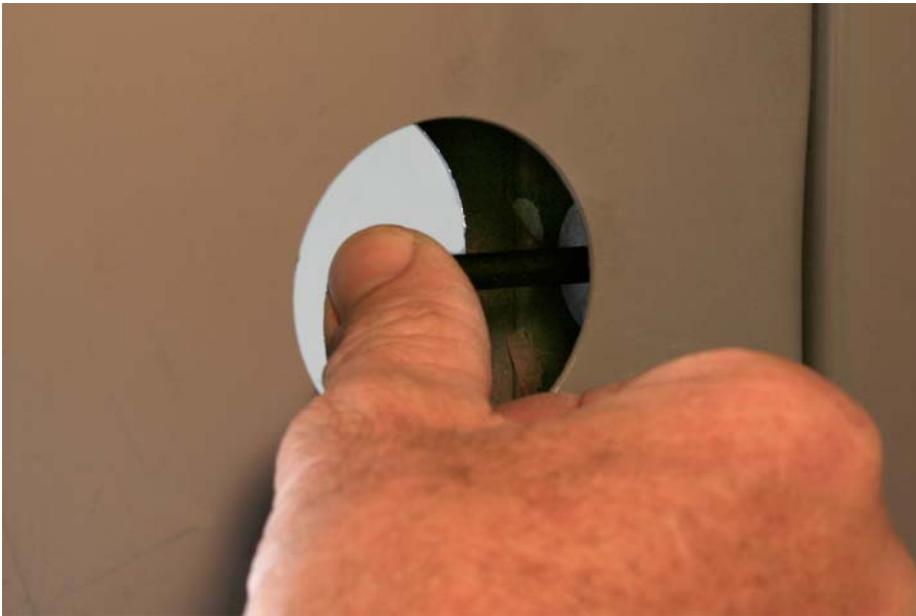

HIT-24 guide being mounted in door. Use the mounting screws supplied with the lock being installed to hold in place.

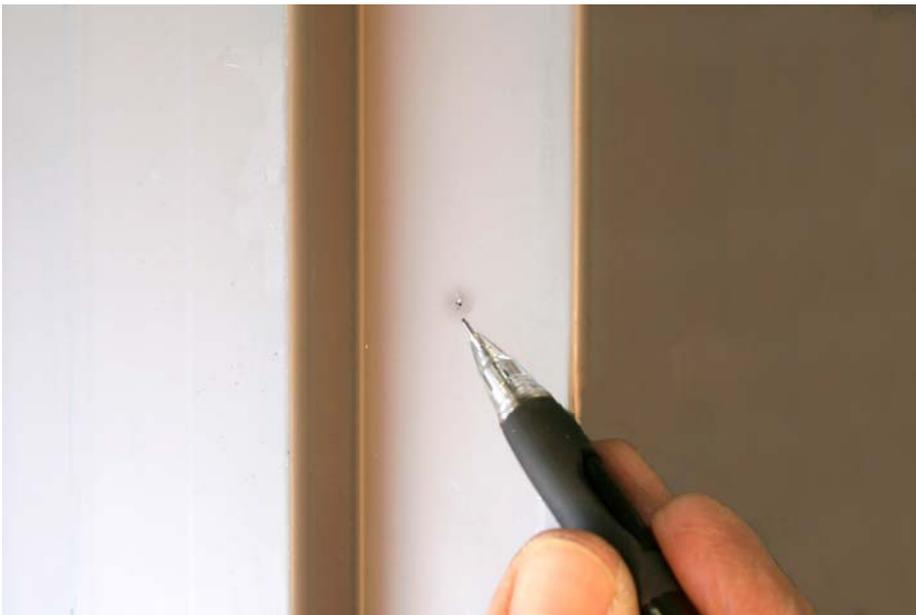

HIT-24 guide mounted in door.

Place the locator point in the HIT-24 push all the way in and close the door.

Apply pressure to the locator point to leave a mark on the door jamb.

This is the exact center of the strike. Use this point to establish layout lines required for the strike cutout. See a listing of the strike mounting brackets we offer on our web site to mount strikes plates in steel jambs.

That's all there is to it!
